

Senior Software Developer

As a Senior Software Developer you will perform product design, coding, unit testing and bug verification. You will be a member of a team that designs, creates, enhances and maintains commercial applications used by Fortune 1000 companies.

Job Requirements:

- Bachelors degree in Computer Science and five or more years of software engineering experience OR equivalent knowledge and experience for the right person.
- Java as a current primary language. Proficiency in C#.Net also required. Additional knowledge in several, but not necessarily all, of the following required: HTML, JavaScript, XML, XSLT.
- Good GUI design skills a must.
- Advanced technical knowledge in software development methodologies, design and implementation. Good analytical and design skills. Good understanding of the development process, including specification, documentation and quality assurance.
- Advanced knowledge of 2-tiered and 3-tiered architectures.
- Strong object-oriented/object-based programming skills demonstrating intelligent abstractions and interface design.
- Working knowledge of the SQL dialect and relational database theory.
- General usable knowledge of operating systems, network and computer hardware and IT infrastructures.
- Ability and willingness to learn new computer languages and technologies quickly.
- Experience with business/database application GUI development preferred.

Our environment is casual, friendly and flexible, with employee-friendly benefits. This position is based in Houston. Our company is established in the industry and has been providing software to large corporations for 15 years. Relocation may be considered for the right candidate.
